NEWS RELEASE

LOMIKO DISCOVERS MULTIPLE MINERALIZED ZONES AT LA LOUTRE

Vancouver, B.C and Montreal, Quebec December 13, 2016—Lomiko Metals Inc. ("Lomiko Metals") (TSX-V: LMR, OTC: LMRMF, FSE: DH8B) and Canada Strategic Metals Inc. ("Strategic Metals"") (TSX.V: CJC; FSE: YXEN; OTC-BB: CJCFF) are pleased to announce A 1550 M drill program of 10 holes was completed in the new Refractory Zone at the La Loutre Flake Graphite Property which intercepted multiple zones of graphite mineralization. "The intercepts of multiple zones of mineralization in the Refractory Zone where we have reported high grade intercepts previously is a very promising sign. The samples have been rushed to the ALS Laboratory for full assay testing.", stated A. Paul Gill, CEO.

On February 9th, 2016, Lomiko Metals and Canada Strategic announced a resource for the La Loutre Flake Graphite Property of 18.4 M Tonnes of 3.19% Indicated and 16.7 M Tonnes at 3.75% Flake Graphite Inferred with a cut-off of 1.5%. The sensitivity table also features 4.1 M Tonnes of 6.5% Indicated and 6.2 M Tonnes at 6.1% Flake Graphite Inferred with a cut-off of 3%. The Resource is calculated on the Graphene-Battery Zone only and **does not** include recent high grade intercepts of 28.5 Metres of 16.53% Cg and 21.5 Metres of 11.53% Cg reported January 6, 2016 and 9% over 90.75 metres reported September 24th 2015 from the Refractory Zone.

The La Loutre property consists of contiguous claim blocks totalling approximately 2,867.29 hectares (28.67 km²situated approximately 53 km east of Imerys Carbon and Graphite, formerly known as the Timcal Graphite Mine, North America's only operating graphite mine, and 117 km northwest of the International Port of Montreal, key to shipping to North America and Europe. The Lac des Iles Property is directly west of the Imerys Graphite Mine. Lomiko Metals is currently completing the 2nd option to acquire 80% of the La Loutre and Lac des Iles properties which requires \$580,000 work expenditure between La Loutre property and others Canada Strategic properties.

The La Loutre Resource is constrained within a drilled area of approximately 900 m along the N150° striking trend of the graphitic paragneiss, 250 m across the strike and 225 m below surface. Geological interpretation and estimation were based on 62 NQ drill holes (totaling 8193.3 m) drilled by Lomiko Metals and Canada Strategic Metals in 2014 and 2015.

QUALIFIED PERSONS

Jean-Sebastien Lavallée (OGQ #773), Geologist, is a shareholder of both companies, President and Chief Executive Officer of the Canada Strategic and a Qualified Person under NI 43-101, has reviewed and approved the technical content of this release.
