

Critical minerals developer in Quebec, Canada for a shared *climate success story*

TSXV: LMR OTC: LMRMD Frankfurt: DH8C January 2025

DISCLAIMER

This presentation is not a prospectus, offering memorandum or an advertisement and is being provided for information purposes only and does not constitute or form part of, and should not be construed as, an offer or invitation to sell or any solicitation of any offer to purchase or subscribe for any securities of Lomiko Metals Inc. (the "**Corporation**") in Canada, the United States or any other jurisdiction. Neither this presentation, nor any part of it, nor anything contained or referred to in it, nor the fact of its distribution, should form the basis of or be relied on in connection with or act as an inducement in relation to a decision to purchase or subscribe for or enter into any contract or make any other commitment whatsoever in relation to any securities of the Corporation.

This presentation contains "forward-looking information" within the meaning of the applicable Canadian securities legislation that is based on expectations, estimates, projections and interpretations as at the date of this presentation. The information in this presentation about the Corporation; and any other information herein that is not a historical fact may be "forward-looking information" ("**FLI**"). All statements, other than statements of historical fact, are FLI and can be identified by the use of statements that include words such as "anticipates", "plans", "continues", "estimates", "expects", "may", "will", "projects", "predicts", "proposes", "potential", "target", "implement", "scheduled", "intends", "could", "might", "should", "believe" and similar words or expressions. FLI in this presentation includes, but is not limited to: the Corporation's objective to become a responsible supplier of critical minerals, exploration of the Corporation's projects, including timing for completion of exploration programs; the Corporation's ability to successfully fund, or remain fully funded for the implementation of its business strategy and for exploration of any of its projects (including from the capital markets); any anticipated impacts of COVID-19 on the Corporation's business objectives or projects, the Corporation's financial position or operations, and the expected timing of announcements in this regard. FLI involves known and unknown risks, assumptions and other factors that may cause actual results or performance to differ materially. This FLI reflects the Corporation's upon while considered results or current views about future events, and while considered resonable by the corporation and its business partners; ability to implement its business strategy and to fund, explore, including results therefrom and its business partners; ability to implement its business strategy and to fund, explore a considered reasonable by the Corporation at this time, are inherently subject to significant uncertainties and c

The Corporation's actual results, programs and financial position could differ materially from those anticipated in such FLI as a result of numerous factors, risks and uncertainties, many of which are beyond the Corporation's control. These include, but are not limited to: the market for critical minerals; the evolution of supply and demand for critical minerals; the Corporation's projects may not be explored or developed as planned; uncertainty relating to possible cost-overruns in implementing its business strategy and developing its projects; market prices affecting development of the projects; the availability and ability to secure adequate financing and on favourable terms; inability to obtain required governmental permits; any limitations on operations imposed by governments in the jurisdictions where we operate; technology risk; inability to achieve and manage expected growth; political risk associated with foreign operations; changes in government regulations, including currency controls; changes in environmental requirements; failure to obtain or maintain necessary licenses, permits or approvals; risks associated with COVID-19; insurance risk; litigation risk; receipt and security of mineral presources and mineral reserves in the future, including uncertainties regarding assumptions underlying such estimates; whether mineral resources (if any) will eve be converted into mineral reserves; opposition to exploration and/or development of the projects; surface access risk; geological, technical, drilling or processing problems; health and safety risks; unanticipated results; unpredictable weather; unanticipated delays; reduction in demand for minerals; intellectual property risks; dependency on key personnel; workforce and equipment availability; currency and interest rate fluctuations; and volatility in general market and industry conditions.

This Presentation has not been independently verified and the information contained within may be subject to updating, revision, verification and further amendment. Except as otherwise provided for herein, neither the Corporation, nor its directors, officers, shareholders, agents, employees or advisors give, has given or has authority to give, any representations or warranties (express or implied) as to, or in relation to, the accuracy, currency, reliability or completeness of the information or opinions in this Presentation, or any revision thereof, or of any other written or oral information made or to be made available to any interested party or its advisers and liability therefore is expressly disclaimed for any loss howsoever arising, directly or indirectly, from any use of such information or opinions or otherwise arising in connection therewith.

Except as may be required by applicable law, in furnishing this presentation, the Corporation does not undertake or agree to any obligation to provide the recipient with access to any additional information or to update this presentation or to correct any inaccuracies or omissions. Information contained in this presentation is the property of the Corporation and it is made available strictly for the purposes referred to above.

Land Acknowledgement

The land/projects where we operate are located within the traditional land of the Algonquin Anishnaabeg and Cree Eeyou Istchee Peoples.

Our vision is to embrace Indigenous people and Indigenous values within our projects to develop a sustainable approach on our path to critical minerals development while honouring the lives, memories, and hopes of all seven generations close.

The La Loutre graphite project site is located within the Kitigan Zibi Anishinabeg (KZA) First Nation's territory. The KZA First Nation is part of the Algonquin Nation and the KZA traditional territory is situated within the Outaouais and Laurentides regions.

The Bourier lithium project site is located southeast of the Eeyou Istchee James Bay territory in Quebec, near Nemaska Lithium and Critical Elements.

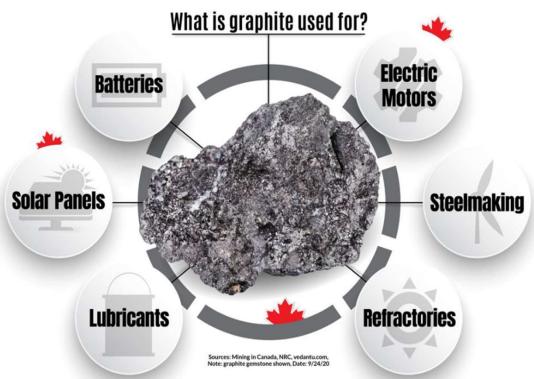

Graphite Market

Graphite is essential for the energy transition

- Primary Battery Alkaline, primary alkaline lithium, primary lithium Thionyl Chloride
- Secondary Battery EV, Consumer Good Industrial, Aerospace, Solar Panels
- Fuel cells
- Nuclear Industry (Grade Graphite; PBMR Shielding)
- Aerospace (Coatings & Dispersion)
- Graphene oxides, powders, etc.
- Refractories and Steelmaking
- Ceramics
- Advanced Lubricants
- Thermal Plastics (PEEK / PTFE) and plastics
- Construction Industry (reinforced concrete)

The China dynamic underlines the importance of Lomiko

China is the world's top graphite producer and exporter and refines more than 90% of the world's graphite into the anode material.

- Trade war on critical minerals is escalating China banned shipments of gallium, germanium, antimony, and so-called superhard materials to USA - Critical mineral security is linked to the escalating tech trade war.
- Export permits from China now required for certain graphite products to safeguard national security since December 2023 tightened measures in December 2024

The USA response:

- 1. The tariff rate on lithium-ion EV batteries increase from 7.5% to 25% in 2024
- 2. The tariff rate on lithium-ion non-EV batteries will increase from 7.5% to 25% in 2026
- 3. The tariff rate on battery parts increase from 7.5% to 25% in 2024
- 4. The tariff rate on natural graphite and permanent magnets will increase from zero to 25% in 2026

Canada imposed a 100% surtax on Chinese-made electric vehicles (EVs) on October 1, 2024

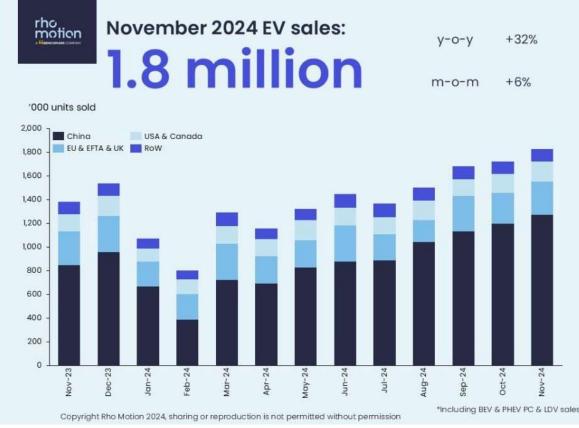

Lomiko: an ideal partner for investment into electrification growth market

Outstanding investment opportunity to participate in energy transition and natural flake graphite with government partners with grants from Quebec, the USA Department of Defence and the Canadian Federal government

Globally the EV market continues to show strong growth, up 21% compared to the same period (Jan-Sept) in 2023

And the need for domestic sources of graphite is a long-term strategic imperative.

November 2024 – 1.8M units sold

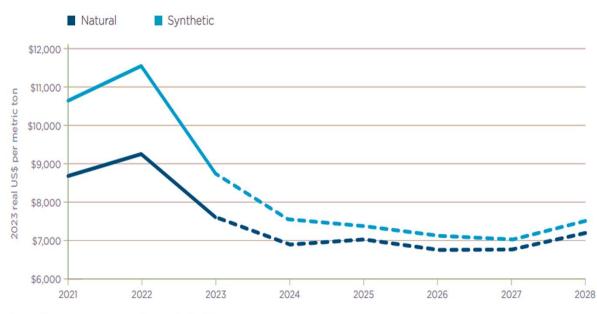

Business Proprietary

Lomiko and the Graphite Market

The graphite customer base is wide with many industrial applications, with the EV sector anticipated to grow in the next 5-15 years, driving the need for natural-flake graphite and anode material for use in batteries.

- Electric Vehicles (EVs) Lomiko is advancing the qualification process with OEMs and downstream buyers. Polaris and NRC's basic electrochemistry analysis shows potential for La Loutre Flake Graphite to become a feedstock for the anode market.
- Internal Combustion Engines—Primary batteries require high-purity micronized flake graphite and qualifications in 18 months.
- Consumer Goods conductive additives for cathode and anode applications in medical devices, aerospace, defence, and industrial at 99.9%Cg for C & D and AA & AAA Battery Formats - 45 & 15 microns
- Energy Storage the fastest-growing sector for grid stabilization, transportation, communications, and aerospace.

Grants and Awards – Non-dilutive capital

Over CA\$16m concurrent Canadian and USA funding announced May 16

- ✓ These are non-dilutive non-repayable awards!
- Recipient of a US\$8.35m (CA\$11.2m) R&D (Research & Development) grant from the United States of America Department of Defense ("DoD") and CAN \$4.9m contribution from Natural Resources Canada

Awards support a de-risked path of development with funding for more than 50% of project costs

- ✓ Announcements are part of the joint Canada-U.S. Energy Transformation Task Force
- ✓ The DoD grant, called a Technology Investment Agreement ("TIA") supports studies for La Loutre to complete pre-feasibility (PFS), baseline and metallurgical studies and definitive feasibility study (DFS)
- ✓ The Canadian Critical Mineral Research, Development and Demonstration (CMRDD2) program administered by Natural Resources Canada is to pilot the integrated graphite upgrading process to for cSPG anode grade product

Summary of CMRDD program administered by Natural Resources Canada

✓ Award: CAN\$4.9m

- The CMRDD program administered by Natural Resources Canada is to pilot the integrated graphite upgrading process with a 200 mt bulk sample over 3 years for a total contribution agreement of CA\$6.6m where Lomiko will contribute 25% of this funding
- It supports four tasks: these tasks complement Phase 2 of the DoD grant
- All work and equipment will be in a Canadian lab setting

Task 1: Crushing, grinding and flotation of La Loutre graphite

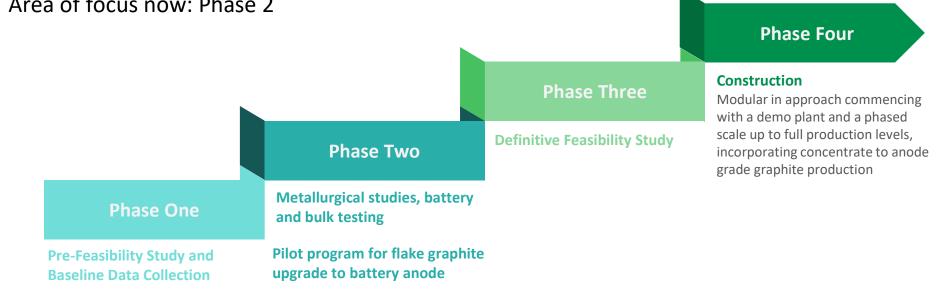

- Task 2: Chemical and thermal purification of graphite concentrate
- Task 3: Micronization and spheriodization of the flotation concentrate
- Task 4: Carbon coating of purified graphite

La Loutre development

A de-risked path to continued development of this strategic critical mineral asset

• The U.S. DoD has provided a grant for <u>50%</u> of the study costs and NRCan is contributing <u>75%</u> of the pilot program costs, significantly de-risking the project.

Area of focus now: Phase 2

La Loutre and Graphite Portfolio

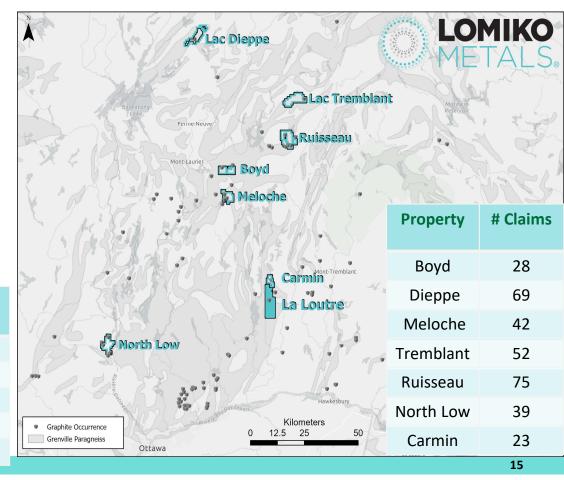

Regional exploration in Grenville belt Most prospective graphite belt in North America

- 328 claims in total on 7 early-stage projects covering 18,622 hectares in the Laurentian region of Quebec and within KZA territory
- **Regional Exploration Program 2023** (field program results displayed below)

Block	# samples	Min %Cg	Max %Cg	Comments
Boyd	8	5.61	17.10	8/8 > 5.00% Cg
Dieppe	11	0.15	1.47	
Meloche	6	5.62	12.00	6/6 > 5.00% Cg
Ruisseau	26	0.16	22.90	19/26 > 5.00% Cg
Tremblant	6	<0.05	13.90	4/6 > 5.00% Cg

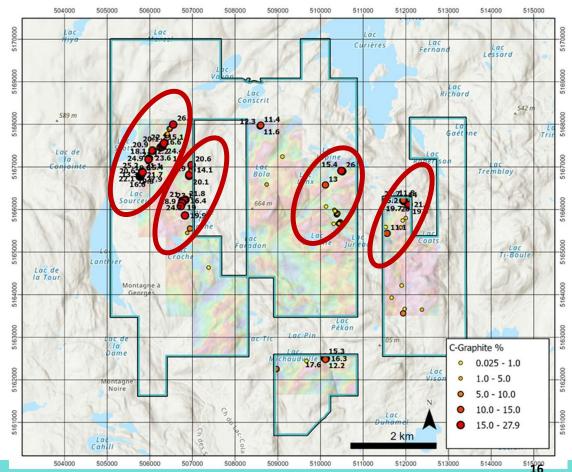

2024 field program discovers 4 zones spanning over 3.0 kilometer long grading up to 27.9% Cg at Ruisseau

2024 Field Program results for Meloche, Dieppe, Tremblant and Ruisseau

- Ruisseau grades up to 27.9 percent carbon graphite ("% Cg") from four distinct high grade mineralized zones that are over 3km long;
- Meloche grades up to 13.3% Cg from two distinct mineralized clusters;
- Tremblant grades up to 11.6% Cg from numerous, widespread spot anomalies; and
- Dieppe grades up to 6.82% Cg from numerous, widespread spot anomalies and a distinct mineralized cluster.

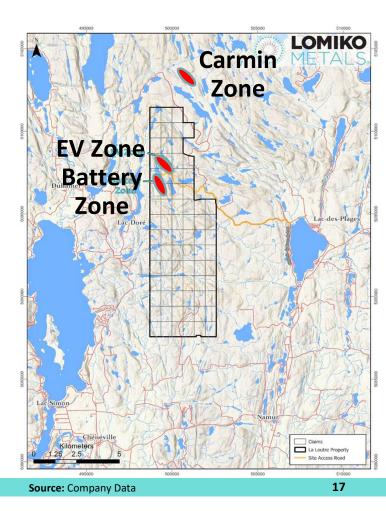

La Loutre PEA details dated September 2021

- Two known deposits currently being explored: EV Zone and Battery Zone
- LOM plant production of 21.8 Mtonnes of mill feed at 6.78% Cg diluted
- Graphite concentrate production at 1.43 Mtonnes grading 95.0% Cg
- 14.7-year mine life producing 100,000tpy of graphite
- Exceeded PEA test with PFS level testing Open circuit variability flotation tests produced concentrate grades between 97.9% and 99.7% Cg with 9.47% recoveries!
- Focused footprint relative to claim size

Carmin Acquisition – historic PFS

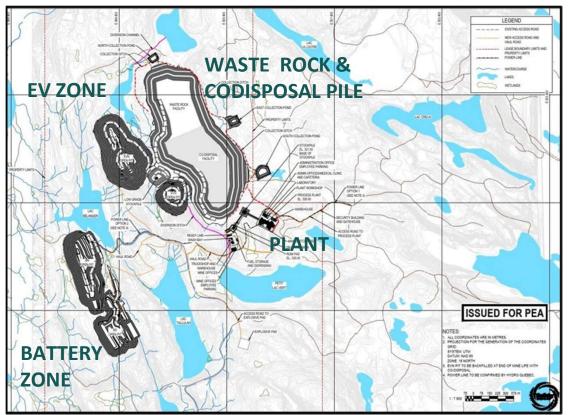

La Loutre: PEA Layout – great base to build on

Mine layout and costs – PEA

- Waste rock and tailings co-disposed
- Efficient site water management with no wet tailings
- Pits sequenced to maximize the returns starting from North – EV Pits to South – Battery Pits
- Stockpiles (low grade and ROM) for blending and Flotation Plant
- Mine truck & shovel operation
- Flotation Plant 4,000tpd
- Capex of C \$236M, AISC US \$406/t Cg cost

MINING INTELLIGENCE

La Loutre single-layer pouch full-cell battery testing met and surpassed commercial graphite results

- ✓ Demonstrated that La Loutre material is suitable for battery applications – single layer pouch full cell battery testing completed with Polaris Battery Labs, LLC, USA.
- The single-layer pouch cells constructed with La Loutre graphite anode and standard cathode material: cSPG16 and cSPG20 samples from La Loutre reveal strong performance of the La Loutre cSPG with better discharging capacity compared to commercial graphite material in North America today (358-367mAh) depending on the purification methods
- ✓ Both samples were put through a brief life cycle analysis for 25 cycles at C/2 and performed well.
- \checkmark Figure top Lomiko graphite Single layer pouch batteries produced and tested by Polaris
- ✓ Figure bottom SPG20 sample from La Loutre has better charging/discharging capacity compared to commercial graphite in the market today in North America.

Next Steps – Phase 2 works: Metallurgical and Battery Trials

- CRITM Quebec studies
 - Lab testing to set bulk sample processing conditions
 - Process 1,100kg of the material to generate flotation flakes
 - NRC- 2000-cycle battery tests
- Polaris
 - Further 500-cycle battery testing
- Air Classification Testing
 - Upgrade crushed ore to +97%Cg without the use of water
 - Use the pressured air to separate waste and graphite
- Graphene testing
 - Produce graphene for use in paints, additives and specialty batteries
- Initiating the 200t bulk sample with local operators
 - To start permitting 4-5 test locations in EV Zone

Share structure

Lomiko has a tight capital structure with 48.7m shares outstanding

Lomiko Metals Inc

December 12, 2024

Total Issued and Outstanding	48,689,505
Options	2,174,000
Warrants	18,462,420
Broker Warrants	253,470

RSU	1,481,228
Fully Diluted	71,840,307

Why invest in Lomiko?

- \$16M in the grants and investment agreement non-repayable securing 50% of all the funds needed to come to the construction decision
- ✓ Pilot processing financed the project at 75% of the cost by the federal government and it is **non-repayable!**
- ✓ Project is vetted by the US Department of Defense and the Federal Government
- ✓ Secure jurisdiction
- Chinese export restrictions on graphite will fuel the shortage for North American automakers
- ✓ La Loutre is the seventh biggest graphite deposit close to the US and battery highway
- ✓ Battery testing showcases excellent results meeting and exceeding industry standard

La Loutre metallurgical program 99.99% purified graphite content

- ✓ Completed PFS level met testing and optimized flow sheet
- Completed value-added testing with ProGraphite micronization, spheroidization, and purification:
- Proved that La Loutre material is suitable for battery applications -Spherical Graphite production yielded excellent results
- Achieving excellent 99.99%Cg SPG and flake purity
- ✓ All physical characterization tests produced excellent results
- Achieved continuous and reliable production of micronized products with homogenous properties.
- Low specific energy input to convert the La Loutre flotation concentrate to micronized material.

Traditional Graphite Markets Opportunities in addition to EV-ICE and Energy Storage

- Engineered Products include electronics, agriculture, automotive, ceramics, government defence, carbon brushes, and fire retardants that use natural flake graphite. Graphite foils in sheets and rolls are used in electronics, nuclear applications, and other thermal management applications in this market group. Standard 95.0% Cg and High Purity 99.9% Cg
- **Expanded graphite** LL graphite can be used for primary alkaline batteries, ceramics, and other electrochemistry applications. Expanded graphite can be purified through the Cl/thermal process to produce a high-purity product. Lomiko completed the testing on +50 and +80 mesh meeting and surpassing industry-level results
- Lubricants Applications include grease, dispersions, dry, nuclear-grade, aerospace, agriculture, MIL-SPEC, rail and foodgrade lubricants. Traditional and advanced graphite powder additives are used in all applications listed with standard 95.0%Cg and high purity 99.9% Cg grades in various mesh sizes and micron PSDs
- Polymers and Plastics, rubbers, and coatings will extend the life of consumer devices, automotive tires, reusable plastics, industrial bearings, and plastics used in antistatic films, coatings, and electronic packaging. Graphite powder is used as a lubricant or conductive additive, including power cables, PTFE, PEEK, seals, bearings, coatings, rubber seals, wiper blades, antistatic packaging, thermal plastics and paints. Based on both Corem and PH analytical reports, there are chemical markers of the La Loutre signature that are unique for use in coatings, seals, thermal plastics, and consumer goods.
- **Graphene** Graphene's manufacturing process uses natural flake graphite to produce a single layer, a few layers, and multilayer plates. applications in high-frequency electronics, bio, chemical and magnetic sensors, ultra-wide bandwidth photodetectors, and energy storage and generation. Lomiko is undertaking studies to determine La Loutre graphite's suitability for graphene production. Graphene is a transparent and flexible conductor used in many high-tech applications.
