

Critical minerals developer in Canada for a shared *climate success story* 

TSXV: LMR OTC: LMRMF Frankfurt: DH8 **April 2025** 

#### DISCLAIMER

This presentation is not a prospectus, offering memorandum or an advertisement and is being provided for information purposes only and does not constitute or form part of, and should not be construed as, an offer or invitation to sell or any solicitation of any offer to purchase or subscribe for any securities of Lomiko Metals Inc. (the "**Corporation**") in Canada, the United States or any other jurisdiction. Neither this presentation, nor any part of it, nor anything contained or referred to in it, nor the fact of its distribution, should form the basis of or be relied on in connection with or act as an inducement in relation to a decision to purchase or subscribe for or enter into any contract or make any other commitment whatsoever in relation to any securities of the Corporation.

This presentation contains "forward-looking information" within the meaning of the applicable Canadian securities legislation that is based on expectations, estimates, projections and interpretations as at the date of this presentation. The information in this presentation about the Corporation; and any other information herein that is not a historical fact may be "forward-looking information" ("**FLI**"). All statements, other than statements of historical fact, are FLI and can be identified by the use of statements that include words such as "anticipates", "plans", "continues", "estimates", "expects", "may", "will", "projects", "predicts", "proposes", "potential", "target", "implement", "scheduled", "intends", "could", "might", "should", "believe" and similar words or expressions. FLI in this presentation includes, but is not limited to: the Corporation's objective to become a responsible supplier of critical minerals, exploration of the Corporation of exploration of exploration programs; the Corporation's ability to successfully fund, or remain fully funded for the implementation of its business strategy and for exploration of any of its projects (including from the capital markets); any anticipated impacts of COVID-19 on the Corporation's business objectives or projects, the Corporation's financial position or operations, and the expected timing of announcements in this regard. FLI involves known and unknown risks, assumptions and other factors that may cause actual results or performance to differ materially. This FLI reflects the Corporation's suboit future events, and while considered resonable by the corporation and its business partners; ability to implement its business strategy and to fund, explore, including resplects (critical minerals, exploration or operations and the generation of a suboit explore a capital markets); any anticipated impacts of COVID-19 on the Corporation's business objectives or projects, the Corporation's financial position or operations, and the expected timing of announcements

The Corporation's actual results, programs and financial position could differ materially from those anticipated in such FLI as a result of numerous factors, risks and uncertainties, many of which are beyond the Corporation's control. These include, but are not limited to: the market for critical minerals; the evolution of supply and demand for critical minerals; the Corporation's projects may not be explored or developed as planned; uncertainty relating to possible cost-overruns in implementing its business strategy and developing its projects; market prices affecting development of the projects; the availability and ability to secure adequate financing and on favourable terms; inability to obtain required governmental permits; any limitations on operations imposed by governments in the jurisdictions where we operate; technology risk; inability to achieve and manage expected growth; political risk associated with foreign operations; changes in government regulations, including currency controls; changes in environmental requirements; failure to obtain or maintain necessary licenses, permits or approvals; risks associated with COVID-19; insurance risk; litigation risk; receipt and security of mineral projects; whether mineral resources and mineral reserves in the future, including uncertainties regarding assumptions underlying such estimates; whether mineral resources (if any) will ever be converted into mineral reserves; opposition or development of the projects; surface access risk; geological, technical, drilling or processing problems; health and safety risks; unanticipated results; unpredictable weather; unanticipated delays; reduction in demand for minerals; intellectual property risks; dependency on key personnel; workforce and equipment availability; currency and interest rate fluctuations; and volatility in general market and industry conditions.

This Presentation has not been independently verified and the information contained within may be subject to updating, revision, verification and further amendment. Except as otherwise provided for herein, neither the Corporation, nor its directors, officers, shareholders, agents, employees or advisors give, has given or has authority to give, any representations or warranties (express or implied) as to, or in relation to, the accuracy, currency, reliability or completeness of the information or opinions in this Presentation, or any revision thereof, or of any other written or oral information made or to be made available to any interested party or its advisers and liability therefore is expressly disclaimed for any loss howsoever arising, directly or indirectly, from any use of such information or opinions or otherwise arising in connection therewith.

Except as may be required by applicable law, in furnishing this presentation, the Corporation does not undertake or agree to any obligation to provide the recipient with access to any additional information or to update this presentation or to correct any inaccuracies or omissions. Information contained in this presentation is the property of the Corporation and it is made available strictly for the purposes referred to above.

### Land Acknowledgement

The land/projects where we operate are located within the traditional land of the Algonquin Anishnaabeg and Cree Eeyou Istchee Peoples.

Our vision is to embrace Indigenous people and Indigenous values within our projects to develop a sustainable approach on our path to critical minerals development while honouring the lives, memories, and hopes of all seven generations close.

The La Loutre graphite project site is located within the Kitigan Zibi Anishinabeg (KZA) First Nation's territory. The KZA First Nation is part of the Algonquin Nation and the KZA traditional territory is situated within the Outaouais and Laurentides regions.

The Bourier lithium project site is located southeast of the Eeyou Istchee James Bay territory in Quebec, near Nemaska Lithium and Critical Elements.

## Lomiko 2025 advantage

#### Exposure to two strategic minerals in demand in North America – graphite and antimony

- New investment in antimony, silver, and gold exploration project in Newfoundland excellent upside in critical mineral that is banned for export from China
- ✓ La Loutre is the seventh biggest graphite deposit close to the US and battery highway; making it the largest undeveloped natural flake graphite project in Canada

#### Endorsement from Federal, Provincial and Federal grant agencies

- ✓ **\$16M** in the awards and investment agreement **non-repayable securing 50%** of all study funds
- ✓ Project is vetted by the US Department of Defense and the Federal Government

#### **Energy transition and energy security investment opportunity**

- ✓ Chinese export restrictions on graphite and antimony demonstrate tremendous upside potential
- ✓ Battery testing showcases excellent results, meeting and exceeding industry standards.

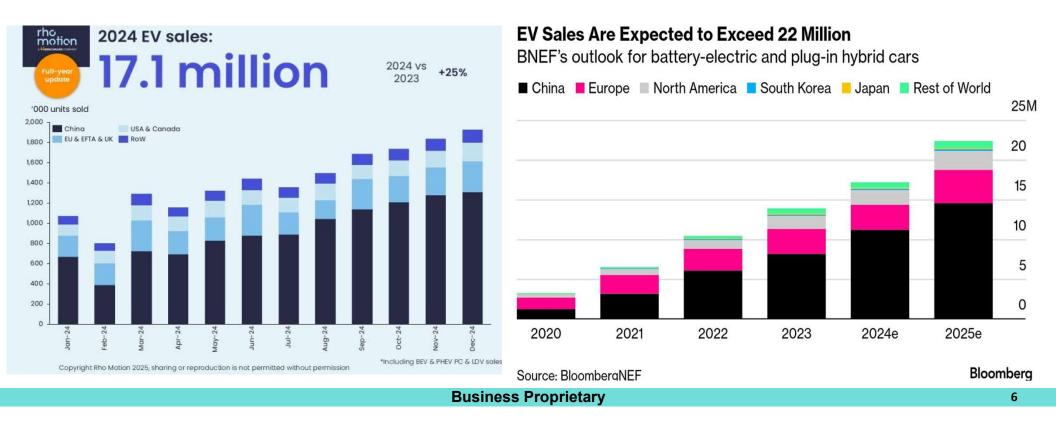

## **Graphite Market**

# Lomiko: an ideal partner for investment into electrification growth market at 25% growth rate

Outstanding investment opportunity to participate in energy transition and natural flake graphite with government partners with grants from Quebec, the USA Department of Defence and the Canadian Federal government.

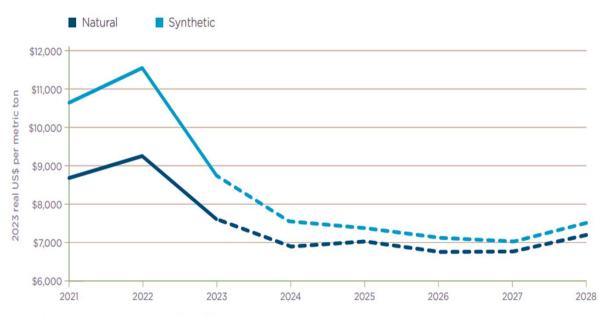

#### Lomiko and the graphite market

The graphite customer base is wide with many industrial applications, with the EV sector anticipated to grow in the next 5-15 years, driving the need for natural-flake graphite and anode material for use in batteries.

- Electric Vehicles (EVs) Lomiko is advancing the qualification process with OEMs and downstream buyers. Polaris and NRC's basic electrochemistry analysis shows potential for La Loutre Flake Graphite to become a feedstock for the anode market.
- Internal Combustion Engines—Primary batteries require high-purity micronized flake graphite and qualifications in 18 months.
- Consumer Goods conductive additives for cathode and anode applications in medical devices, aerospace, defence, and industrial at 99.9%Cg for C & D and AA & AAA Battery Formats - 45 & 15 microns
- Energy Storage the fastest-growing sector for grid stabilization, transportation, communications, and aerospace.

Actual price in China for Anode Material 2021-2028

**Business Proprietary** 

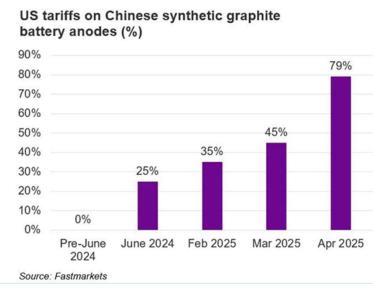

### The China dynamic underlines the importance of Lomiko

China is the world's top graphite producer and exporter, refining more than 90% of the world's graphite into anode material.

- Trade war on critical minerals is escalating China banned shipments of gallium, germanium, antimony, and so-called superhard materials to USA - Critical mineral security is linked to the escalating tech trade war.
- Export permits from China now required for certain graphite products to safeguard national security since December 2023 – tightened measures in December 2024

According to Benchmark Minerals Intelligence.

- US demand for natural graphite is expected to grow
- There is a concerted focus by US supply chains to source ex-China graphite material
- US domestic supply will continue to fall short, keeping the country reliant on imports
- Globally, natural graphite demand is set to grow strongly to reach 2.8 million tonnes (MT) by 2035, from 1.2MT in 2025, largely fuelled by the battery sector

## Grants and Awards – Non-dilutive capital

#### Over CA\$16m concurrent Canadian and USA funding announced May 16

- ✓ These are non-dilutive non-repayable awards!
- Recipient of a US\$8.35m (CA\$11.2m) R&D (Research & Development) technology investment agreement from the United States of America Department of Defense ("DoD") and CAN \$4.9m contribution from Natural Resources Canada

#### Awards support a de-risked path of development with funding for more than

#### 50% of project costs

- ✓ Announcements are part of the joint Canada-U.S. Energy Transformation Task Force
- ✓ The DoD grant, called a Technology Investment Agreement ("TIA") supports studies for La Loutre to complete pre-feasibility (PFS), baseline and metallurgical studies and definitive feasibility study (DFS)
- ✓ The Canadian Critical Mineral Research, Development and Demonstration (CMRDD2) program administered by Natural Resources Canada is to pilot the integrated graphite upgrading process from the rock to cSPG anode grade product

#### Summary of CMRDD program administered by Natural Resources Canada

#### ✓ Award: CAN\$4.9m

- The CMRDD program administered by Natural Resources Canada is to pilot the integrated graphite upgrading process with a 200 mt bulk sample over 3 years for a total contribution agreement of CA\$6.6m where Lomiko will contribute 25% of this funding
- It supports four tasks: these tasks complement Phase 2 of the DoD grant
- All work and equipment will be in a Canadian lab setting

Task 1: Crushing, grinding and flotation of La Loutre graphite

- Task 2: Chemical and thermal purification of graphite concentrate
- Task 3: Micronization and spheriodization of the flotation concentrate
- Task 4: Carbon coating of purified graphite

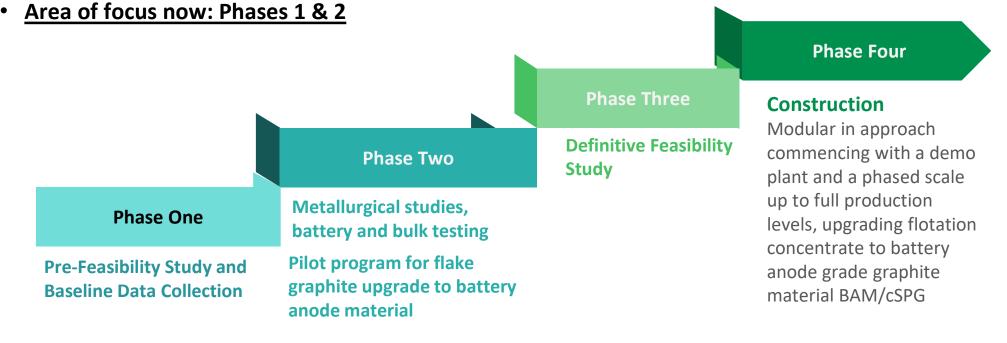

11

#### La Loutre development

#### A de-risked path to continued development of this strategic critical mineral asset

 The U.S. DoD has provided a TIA for 50% of the study costs, and NRCan is contributing <u>75%</u> of the pilot program costs, significantly de-risking the project.

12

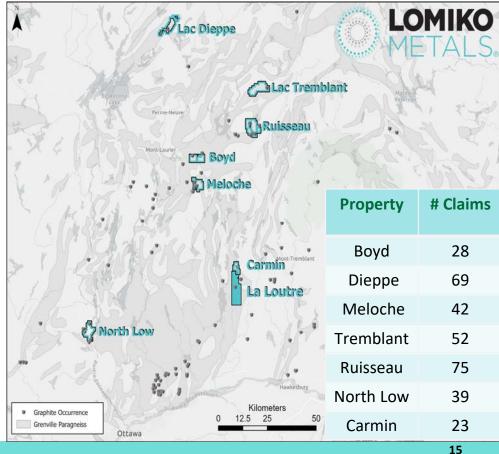

## La Loutre and Graphite Portfolio

#### Regional exploration in Grenville belt Most prospective graphite belt in North America

- 328 claims in total on 7 early-stage projects covering 18,622 hectares in southern Quebec.
- 2024 Field Program results for Meloche, Dieppe, Tremblant and Ruisseau
- Ruisseau grades up to 27.9 percent carbon graphite ("% Cg") from four distinct high grade mineralized zones that are over 3km long;
- Meloche grades up to 13.3% Cg from two distinct mineralized clusters;
- Tremblant grades up to 11.6% Cg from numerous, widespread spot anomalies; and
- Dieppe grades up to 6.82% Cg from numerous, widespread spot anomalies and a distinct mineralized cluster.
- Boyd 8 samples grades range from 5.61%Cg to 17.10
  %Cg with all samples above 5.00% Cg
- The company relied on the independent QP Mark Fekete P.Geo., for all exploration data related to the company's graphite portfolio

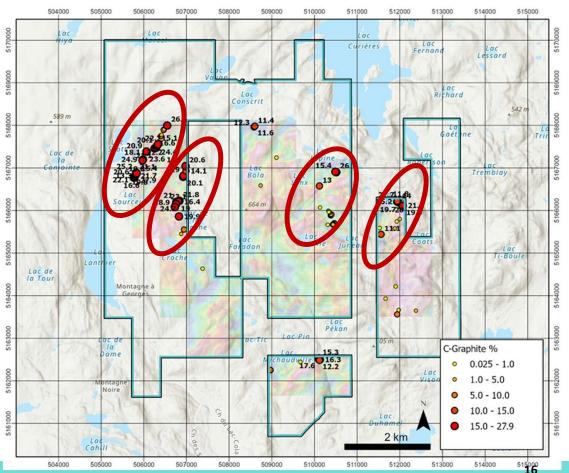

# 2024 field program discovers 4 zones spanning over 3.0 kilometer long grading up to 27.9% Cg at Ruisseau

A total of 107 grab samples were collected:

- 24 samples returned results greater than 20% Cg,
- 55 samples returned results greater than 10% Cg,
- 71 samples returned results greater than 5% Cg

Four distinct high-grade graphite zones outlined:

- the "Northwestern" zone exposed over a distance of 1,500m with maximum values up to 27.9% Cg;
- the "Western" zone exposed over a distance of 1,300m with maximum values up to 24.7% Cg;
- the "Eastern" zone exposed over a distance of 200m with maximum values up to 21.7% Cg;
- the "Southern" zone exposed over 75m exposed with maximum values up to 17.6% Cg.
- The company relied on the independent QP Mark Fekete P.Geo., for all exploration data related to the company's graphite portfolio

# Lomiko advantage: Ranked as the seventh biggest deposit worldwide by Mining.COM

	Property	Country	Owner	Development Status	M+I Resources (mt)	Grade (%)	Contained Graphite (mt)
1.	Balama/Nicanda Hill	Mozambique	Triton Minerals Ltd	Stalled (previously Feasibility)	369	11.3	41.7
2.	Sarytogan	Kazakhstan	Sarytogan Graphite Limited	Prefeasibility	126	28.8	36.3
3.	Lac Gueret (Uatnan)	Canada	Mason Resources Inc	PEA	66	17.19	11.3

The independent and qualified persons for the mineral resource estimate, as defined by NI 43 101, are Marina lund, P.Geo. (InnovExplo Inc.), Martin Perron, P.Eng. (InnovExplo Inc.)., Simon Boudreau, P.Eng. (InnovExplo Inc.). and Pierre Roy, P.Eng. (Soutex Inc.). The effective date of the estimate is May 11, 2023.

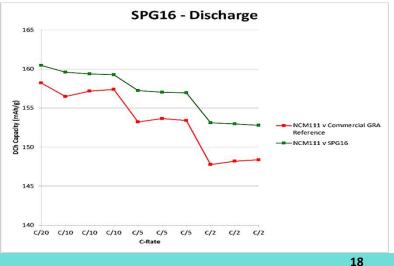

### La Loutre single-layer pouch full-cell battery testing met and surpassed commercial graphite results

- ✓ Demonstrated that La Loutre material is suitable for battery applications – single layer pouch full cell battery testing completed with Polaris Battery Labs, LLC, USA.
- The single-layer pouch cells constructed with La Loutre graphite anode and standard cathode material: cSPG16 and cSPG20 samples from La Loutre reveal strong performance of the La Loutre cSPG with better discharging capacity compared to commercial graphite material in North America today (358-367mAh) depending on the purification methods
- ✓ Both samples were put through a brief life cycle analysis for 25 cycles at C/2 and performed well.
- $\checkmark$  Figure top Lomiko graphite Single layer pouch batteries produced and tested by Polaris
- ✓ Figure bottom SPG20 sample from La Loutre has better charging/discharging capacity compared to commercial graphite in the market today in North America.

All metallurgical and battery testing data were reviewed by the independent QP Oliver Peters, P. Eng from MetPro.

#### Next Steps – Phase 1 & 2 works

#### > Phase 1

- 1. Initiated engineering studies for pre-feasibility. Hired consultants:
  - DRA Americas as the study Lead
  - InnovExplo/Norda Stelo mining and reserves
  - Knight-Piesold geotechnical, geomechanical and hydrology

#### > Phase 2:

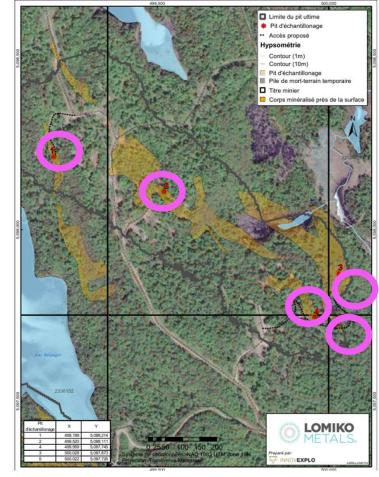

- 1. CRITM Quebec studies
  - Processing 1,100kg of the material to generate flotation flakes
  - Upgrade graphite flakes to anode material/cSPG to create samples for the downstream customers
- 2. Initiating the 200-250t bulk sample with local operators and research institutions
  - Permitting 5 x 50-tonne test locations in EV Zone
  - Hired all local contractors to conduct fieldwork
  - Ore will be crushed off-site before being hauled to the research institutions.
  - Proceed with the Flotation separation testing at the Quebec base lab

## La Loutre – Bulk Sample Locations

- DoD and NRC supported- Pilot Processing
- Testing to be done in EV Zone only
- Proposed 5 locations
- Each Location up to 50 tonnes of ore
- ➢ Road access
- Three cutting minimal
- Stripping area of approximately 5x5 meters or 4x6m
- >Drill/blast an area of 3x3 meters about 2.5-3meters deep
- ➤ Mining
- Haulage from the site to the storage area or the lab Noise monitoring to establish what are the audible levels are

> The information provided by QP Simon Boudreau, P.Eng. (InnovExplo Inc.) who is registered in Quebec and reviewed by Yves Desrosier, from P3 Solutions P.Eng and an independent consultant

## **Antimony Exploration**

#### Antimony

- Antimony is used to increase the hardness of alloys, with lead alloys for batteries, with lead/copper/tin alloys for machine bearings
- It improves the rigidity of lead-alloy plates in lead-acid batteries
- It is also used in automotive clutch and brake parts
- The other major use is as antimony trioxide, which is used for the production of flame retardant chemicals
- Antimony is used in the semiconductor industry for certain silicone wafer, diode, and infra-red detector production
- Small amounts are used in the production of safety matches
- Also, antimony is used in the solar panels

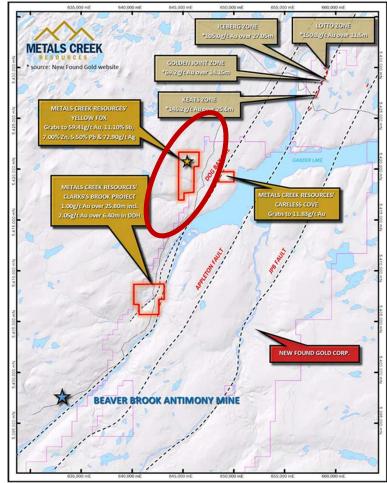

# Yellow Fox antimony, silver and gold potential in Newfoundland

#### **Historic results**

- Yellow Fox is an early-stage exploration property prospective in antimony, gold, and silver where historic works returned samples anomalous in gold (Au), antimony (Sb), lead (Pb), zinc (Zn), and silver (Ag).
- The trenching exposed the rocks, resulting in grab samples to 59.43g/t Au, 11.10% Sb, 7.00% Zn, 72.90g/t Ag, and 5.50% Pb in arsenopyrite-stibnite veins within altered monzogranite.
- This property is on the same trend as the past-producing antimony mine Beaver Brook, which is located 25km southwest of the property and on the same trend.
- Geologically, Yellow Fox exhibits similar traits to that of Beaver Brook with cross-cutting structural zones which show intense carbonate alteration with sulphide-bearing stringers to veins of stibnite and arsenopyrite with similar high-grade tenors of antimony, gold, lead, zinc, and silver. Arsenopyrite is also present in both locations.

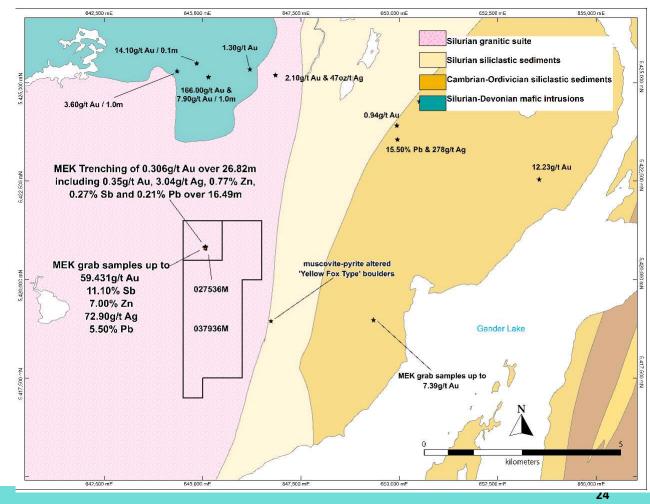

23

#### Yellow Fox Next Steps

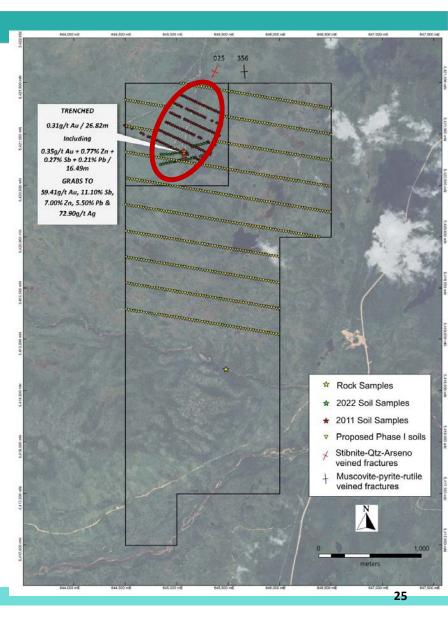

- Review existing data and plan for the fieldwork program in the spring
- Soil sampling program targeted south of the Yellow Fox gold, showing 59.413 g/t and areas of increased density of interpreted structures
- Approximately 700 soil samples on ten, 1000m long, 250m spaced lines trending approximately 110 degrees, with samples taken every 25m along the line.
- The information provided by QP Wayne Reid P.Geo. is registered in Newfoundland

#### Yellow Fox Next Steps

- Approximately 700 soil samples on ten, 1000m long, 250m spaced lines trending approximately 110deg with samples taken every 25m along the line.
- Should the soil sampling program be proven effective, expansion of the lines and additional lines to the south are warranted, which would be the focus of the Phase 2 program.
- Phase 2 will see the soil sampling completed on the 250meter parallel grids at 25-meter spacing covering the southern end of the property.
- Phase 2 will also focus on ground truthing existing targets as well as following up on newly generated targets
- The information provided by QP Wayne Reid P.Geo. is registered in Newfoundland

## Yellow Fox antimony, silver and gold potential in Newfoundland

#### Terms of the Option

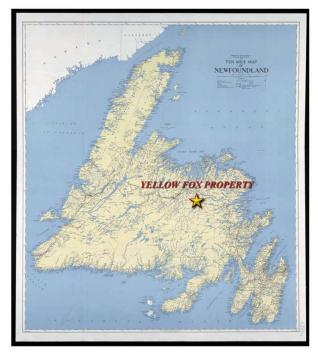

(a) The Optionee shall have the right to acquire 100% of the right, title and interest in and to the Option Interests by making the following payments:

(i) in cash totaling \$70,000, according to the following schedule:

- 1. on the Closing Date, \$20,000;
- 2. on or before first anniversary of this Agreement, \$25,000;
- 3. on or before second anniversary of this Agreement, \$25,000; and

(ii) in common shares of the Optionee (the "LMR Shares") totaling \$355,000, at a price per LMR Share equal to the Market Price on the date of the signature of this Agreement according to the following schedule:

- 1. on the Closing Date, \$55,000 payable in LMR Shares;
- on or before first anniversary of this Agreement, \$125,000 payable in LMR Shares; and
- on or before second anniversary of this Agreement, \$175,000 payable in LMR Shares.

## La Loutre metallurgical program 99.99% purified graphite content

- ✓ Completed PFS level met testing and optimized flow sheet
- Completed value-added testing with ProGraphite micronization, spheroidization, and purification:
- Proved that La Loutre material is suitable for battery applications -Spherical Graphite production yielded excellent results
- ✓ Achieving excellent 99.99%Cg SPG and flake purity
- ✓ All physical characterization tests produced excellent results
- Achieved continuous and reliable production of micronized products with homogenous properties.
- Low specific energy input to convert the La Loutre flotation concentrate to micronized material.

### Traditional Graphite Markets Opportunities in addition to EV-ICE and Energy Storage

- Engineered Products include electronics, agriculture, automotive, ceramics, government defence, carbon brushes, and fire retardants that use natural flake graphite. Graphite foils in sheets and rolls are used in electronics, nuclear applications, and other thermal management applications in this market group. Standard 95.0% Cg and High Purity 99.9% Cg
- **Expanded graphite** LL graphite can be used for primary alkaline batteries, ceramics, and other electrochemistry applications. Expanded graphite can be purified through the Cl/thermal process to produce a high-purity product. Lomiko completed the testing on +50 and +80 mesh meeting and surpassing industry-level results
- Lubricants Applications include grease, dispersions, dry, nuclear-grade, aerospace, agriculture, MIL-SPEC, rail and foodgrade lubricants. Traditional and advanced graphite powder additives are used in all applications listed with standard 95.0%Cg and high purity 99.9% Cg grades in various mesh sizes and micron PSDs
- Polymers and Plastics, rubbers, and coatings will extend the life of consumer devices, automotive tires, reusable plastics, industrial bearings, and plastics used in antistatic films, coatings, and electronic packaging. Graphite powder is used as a lubricant or conductive additive, including power cables, PTFE, PEEK, seals, bearings, coatings, rubber seals, wiper blades, antistatic packaging, thermal plastics and paints. Based on both Corem and PH analytical reports, there are chemical markers of the La Loutre signature that are unique for use in coatings, seals, thermal plastics, and consumer goods.
- **Graphene** Graphene's manufacturing process uses natural flake graphite to produce a single layer, a few layers, and multilayer plates. applications in high-frequency electronics, bio, chemical and magnetic sensors, ultra-wide bandwidth photodetectors, and energy storage and generation. Lomiko is undertaking studies to determine La Loutre graphite's suitability for graphene production. Graphene is a transparent and flexible conductor used in many high-tech applications.
